

CONSENT FOR COMPOSITE RESTORATIONS ON POSTERIOR TEETH

I understand that Beachcrest Dental, Inc. uses a composite material for all non-crown restorations. This office does not do amalgam restorations.

Posterior (back teeth) restorations using composite material (white fillings) are rarely completely covered by dental insurance. Most insurance companies reimburse for what they would pay for an amalgam restoration (silver filling), with the balance the responsibility of the patient.

I agree to be financially responsible for all copays related to posterior composites for myself and all those for whom I am financially responsible.
